[more >>](#)[Report a data error](#) [he](#)**Abstract of CA1108958**

The invention concerns a device for venting stomas and other discharge openings for metabolic products from the human body, the venting device being adapted to be placed in close direct or indirect relationship to the human body and stoma or other body opening, the venting device having a dimension perpendicular to the human body less than at least one dimension parallel to the body, the venting device containing an odor-removing filter material between gas- and liquid-tight walls with delimited passage for gaseous substances, the odor-removing filter material being passed by gases by a path longer than the dimension of the filter perpendicular to the body.
